

SOL-BRINE – 'Water is necessary' invite, Greece

April 17, 2013

The Greek LIFE+ Environment wastewater treatment project SOL-BRINE (LIFE09 ENV/GR/000299) is holding its final conference from 19 to 21 September, on the island of Tinos, located in the Cyclades archipelago.

The international conference, 'Water Is Necessary for Life - WIN4Life' is open to all interested parties, providing participants with the opportunity to exchange views and ideas about water management, advanced wastewater treatment processes and sustainable brine management practices.

The event will include oral and poster presentation sessions. Authors wishing to submit a paper should send an abstract to the Scientific Secretariat, Dr. K. Moustakas (konmoust@central.ntua.gr) by 15 May 2013. There is no registration fee, but advanced registration is strongly recommended. More information on the conference is available at: www.uest.gr/win4life.

The best papers will be published in a special volume of the Journal, "Desalination & Water Treatment". The SOL-BRINE project aims to develop a solar-driven brine treatment system in order to eliminate the current practice of brine disposal. For more information, visit the **project website** (GR/EN).
